

Press Release

Innotech Aviation introduces E-Table for Global series of aircraft.

Innotech Aviation, leading provider and center of excellence for innovative products and services offers the new Innotech E-Table. The E-Table uses existing table tops and incorporates them into an electro-mechanical table frame. Avoid the struggle and guesswork of manually deploying the cabin table. The E-Table has been designed to function with existing table tops. Avoid rework of the veneer and finish, as the E-Table is designed with the purpose to be form fit and function with standard table locations, not requiring any additional space.

The E-Table can be controlled through dedicated local switches or through the Cabin Management System as required. With its simple and safe operation, the automatic feature of the E-Table simplifies and improves deployment and stowing, by eliminating any manual hand operation.

Innotech (www.innotechaviation.com) is based in Montreal at the Pierre Elliot Trudeau Airport, an integral part of the vast Aerospace Hub that Montreal and the Province of Quebec have fostered over the years.
